Systems Designer and Researcher

My work connects architectural design, computation and making. I build computational design environments and multimodal research platforms, alongside architectural projects and physical prototypes, linking design exploration with experimentation and construction.

SKILLS

Computation & AI	Python · software design · generative design · optimisation · LLM workflows
Design and BIM	Sketching · Rhino · Grasshopper · Revit · Dynamo
Robotics	PyBullet · kinematics · motion planning
Fabrication	CNC · laser cutting · FDM printing · assembly
Research	EEG · VR · LSL · study design · signal review
Languages	Persian: native · English: working proficiency

EDUCATION

Iran University of Science and Technology — Expected 2027
Bachelor's degree in Architecture

Thesis: Lunar research station · Supervisor: Dr. Morteza Rahbar

Allameh Helli 1, Tehran · Secondary education · NODET / SAMPAD

RESEARCH AND PROJECT EXPERIENCE

Multimodal research platform and EEG–VR studies — 2026–present
Research assistant to Dr. Bushra Abbasi · IUST

- Develop a multimodal research platform connecting study design, experiment execution, recording, signal review, analysis and evidence provenance.
- Implement Python/LSL EEG streaming; conduct ongoing EEG–VR research covering setup, 64-channel recording, signal review and analysis.

Residence Hell — 2026
System author and designer · Architectural design environment

- Developed an editable environment where people, tool-using AI and algorithms work on a shared design state, with housing as its initial application.
- Integrated generation, evaluation, direct editing and branching to support iterative exploration of alternative design states.
- Defined the system architecture, spatial rules and evaluation criteria, and directed AI-assisted implementation.

Nefar and Telar — 2025
Vernacular field study and later robotic assembly research

- Surveyed timber structures in Alam Kola, documenting their construction through field photographs, drawings and structural models.
- Translated documented members, joints and assembly dependencies into Python-based assembly software and robotic simulation.

Wood–Thread Pavilion — May 2025
Designer and parametric modeller · Harakat Festival, IUST

- Designed and parametrically modelled a full-scale timber-and-thread pavilion; prepared CNC files and collaborated on fabrication and on-site assembly.

PROFESSIONAL EXPERIENCE

Municipal museum
2026

Design collaboration with Dr. Abbaszadeh and Dr. Tafti · Tehran

- Developed architectural concepts and digital models, carried out site analysis, and produced 3D-printed study models for a commissioned municipal museum.

Tehran Experience Studio
Aug–Sep 2024

Construction-site intern

- Documented construction progress and maintained site checklists, relating architectural drawings to on-site execution.

Hermapay Studio
Jul–Sep 2023

Architectural design intern

- Produced digital models and project documentation; surveyed existing conditions in Tehran's historic Naseri urban fabric.

Independent 3D-printing services

- Prepared models, sliced files and produced FDM prints for external projects.

ADDITIONAL DESIGN AND COMPUTATIONAL WORK

- **Architectural design:** studio projects, physical prototypes and structural exploration with Karamba.
- **Building data:** IFC/IfcOpenShell and Neo4j workflows; pathfinding studies.
- **AI workflows:** LangChain/LangGraph and RAG, alongside exploratory work in local LLM fine-tuning and self-play.
- **Robotics:** independent exploration with ROS 2 and Isaac Lab.

TEACHING

AI in architecture workshops
2025–2026

- Taught university students practical AI applications in architectural visualisation and design workflows.

Concept-to-form architecture workshops
2026

- Taught concept development and architectural form to students in grades 7–8; prepared exercises translating words, feelings and music into spatial ideas and miniature-brick models.

VOLUNTARY WORK AND ACADEMIC ENGAGEMENT

Architecture Scientific Association, IUST

- Co-hosted and moderated an English-language conversation with Juhani Pallasmaa at IUST (June 2026).
- Contributed to academic events and competitions through ideation, planning, logistics and spatial setup.

Environmental volunteering

- Participated in environmental cleanup activities.

PERSONAL INTERESTS

I enjoy Persian poetry, sketching, digital drawing, playing guitar and woodworking, as well as travel, hiking and bouldering. I'm curious about philosophy, space exploration and how AI is changing the world. I think a lot about how we should respond to it, and how to build systems that work for people with different goals and values.
