

W04 / COMPLETE RECOVERED OUTLINE CATALOGUE

442 planar parts / native rigid flattening / 28 September 2026

Every outline is recovered from the saved spatial field.

W0001–W0442 are new catalogue labels. Source UUIDs identify the original objects.

All catalogue pages share the same scale. Dimensions are converted from source metres to millimetres. Perimeter and area come from native Rhino measurements.

These profiles exclude inferred drill holes, kerf and sheet thickness. This is a recovery catalogue, not a complete production cut file.

The CSV and JSON retain full source positions, local frames and layout offsets. The paired Grasshopper definition returns the same 442 flat contours.
